

Flickr Exercise

www.flickr.com is a known photo sharing site. flickr provides a well documented api for exploring photos and other tasks.

Your goal in this exercise is to create an html/javascript application that will use this public feed : http://api.flickr.com/services/feeds/photos_public.gne , and show the thumbnails images as a gallery.

Each item should include the following information:

1. The thumbnail.
1. link to the photo page.
2. the title of the image.
3. the author.
4. date taken.

* Clicking on the author's name should reload the gallery with the author's photos only.

Notes:

- * Use the Flickr [documentation](#).
- * **No** need for api key
- * Take into consideration the UI design and the usability of the page.
- * You can use any Javascript library.
- * Pay attention for your coding style and code-design.

Good luck.
